Situation Report for July 27, 2007 (issued @ 1500 hrs.)

07 FIRES

I. Background Information

Since June, hot and dry weather has dominated the region creating very high to extreme fire conditions. Fire Indices are at an all time high while fuel moistures are low. Accompanying the high indices are weather patterns that have set the conditions for lightning and lightning caused starts. High pressure weather patterns over the region are responsible for the high temperatures and little to no moisture. Occasional cold fronts push through the region causing severe lightning storms that ignite wildfires. Rain has accompanied these fronts but a return to a high pressure system mitigates any moisture that fell. The weather forecast project a continuing of the high pressure systems through August and possible into September.

III. Weather

No Red Flag Warnings or Fire Weather Watches have been issued at this time.

Definitions of a Fire Weather Watch and a Red Flag Warning

A fire weather watch or red flag warning is issued when the combination of dry fuels and weather conditions support extreme fire danger. These products are written for land and fire managers to highlight the increased fire danger.

A fire weather watch is issued up to 72 hours before the above conditions are expected to occur.

A red flag warning is issued when the conditions above are occurring or expected to occur within the next 24 hours.
